Recent and Current Customers Include:

- Defense Information Systems Agency
- Department of Air Force
- Department of Navy
- Department of Army
- National Archives and Records Administration
- Non-Profit Retirement Communities

AWS GovCloud (US)

Past Performance Examples

- We perform multiple server and application rationalization and consolidation from various Navy datacenters into secure enterprise datacenters and the AWS Gov-Cloud.
- We work closely with AWS to develop processes consistent with Navy requirements and assist the Navy with adapting processes to Cloud standards.
- We globally deployed hundreds of remote access systems for Navy emergency management networks through the use of VMware and zero-clients.
- We designed, deployed, managed, and procured a large-scale monitoring solution for the Navy to manage incidents, bottle-necks, user compliance, and security vulnerability reporting.
- We provide network, system, and information security management for sensitive enclaves following DIACAP and NIST RMF guidelines
- We support security procedures and processes for FISMA-compliant systems at all three levels
- We performed deep-level IV&V analysis of storage, system licensure, disaster recovery, and network solutions in Navy infrastructures to identify unused potential and cost-savings.
- We conduct analyses of aging systems and provide a plan to transition to datacenters or a cloud provider, with total cost of effort analysis of each option
- We perform technological audits of datacenters and presidential libraries to determine capabilities, upgrade potential, and highlight physical, virtual, and procedural security vulnerabilities for the National Archives

Additional Registrations:

- VA Small, Woman, and Minority Owned Business (SWaM)
- VA and MD Disadvantaged Small Business Enterprise (DBE)
- CA registered with Employment Development Department (EDD)
